SUMMARY

Software Engineer with 2+ years building **.NET 10** microservices and **React** SPAs for enterprise auction platforms. Skilled in **Clean Architecture**, **CQRS**, and **event-driven** systems (**Azure Service Bus**, **Redis**), modernizing legacy services and defining cross-team **API contracts**.

EXPERIENCE

Software Development Engineer I

July 2024 – Present

Xome

Chennai, TN

- Served as **primary point of contact** for the modernization program — resolving external vendor teams' queries within **1–2 days** (often same-day) and **reviewing the majority of internal and vendor pull requests** as a key quality gate.
- Restructured** the system — unified the Offer Service (previously split across two teams) into one, **redesigned the Offer and Auction database schemas**, and **eliminated data duplication** across systems.
- Defined **API contracts** for downstream teams and designed integration architecture, standardizing when to use **Azure Service Bus**, fire-and-forget messaging, or **database triggers** per flow.

Auction & Offer Services — APIs & Workers | *C#, .NET 10, EF Core, Dapper, SQL Server*

- Modernized legacy auction and offer APIs and **background Worker Services** into **.NET 10 microservices** (**Clean Architecture**, **CQRS**, Repository/Strategy), migrating stored-procedure logic to **EF Core** and **Dapper** across **30+ REST controllers**.
- Built the end-to-end **offer lifecycle** (approval/rejection, counter-offer, renegotiation, reinstatement, contract execution, e-sign, sale confirmation) and **pre-auction offer** management behind the Offers API with **RBAC**.
- Re-architected a legacy **15-minute SFTP polling** pipeline into **real-time, event-driven processing** via **Azure Service Bus** with **Redis** caching (~**30%** faster responses); built the API **middleware** (**strangler fig migration orchestrator**, exception handling, request/response logging) and authored **45+ unit-test suites** (xUnit, Moq).

Cascade Web — Auction Management SPA | *React 19, Vite, TypeScript, MUI, React Query*

- Built **auction management pages** (event CRUD, property assignment, bidder registration) in a **React 19 + Vite** SPA (strict **TypeScript**, **MUI**); managed state with **React Query + Zustand** and real-time updates via **SignalR**.
- Integrated secured REST APIs (Axios) with **Azure AD B2C (MSAL)** authentication and role-based UI gating; added reusable components/hooks and **Vitest** unit tests.

Live Auction Dashboard | *React, Next.js, SCSS, WebSockets*

- Built a responsive, mobile-first dashboard with real-time **WebSocket** updates, improving **Core Web Vitals** (LCP, CLS, INP, FID) and reducing redundant API calls by ~**40%**.

Software Engineer Intern

Jan. 2024 – Jun. 2024

Xome

Chennai, TN

- Optimized **MongoDB** schemas and built responsive UI with **React** and **SCSS**, improving query performance, functionality, and cross-device accessibility.

PROJECTS

Mystic — Programming Language | *Python, Java*

Feb. 2023 – Jun. 2023

- Built a programming language from scratch — implementing **lexing**, **parsing**, and **interpretation** — exploring variable scoping and control flow in Python and Java.

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, Python, Java, SQL, HTML/CSS, Dart

Frameworks & Libraries: .NET 10, ASP.NET Core, Entity Framework Core, Dapper, React, Next.js, Node.js, MUI, Zustand, TanStack React Query, SCSS, Tailwind CSS

Cloud & Tools: Azure (SQL, Service Bus, Key Vault, Application Insights, AD B2C), Redis, Docker, Git, Postman, SSMS, Visual Studio

Concepts: Microservices, Clean Architecture, CQRS, REST APIs, SOLID, Design Patterns, RBAC, Unit Testing (xUnit, Moq, Vitest), CI/CD, Agile
